

# Avalanche danger

Forecast through: 19.3.2024, 17:00 / Next update: 19.3.2024, 08:00

## Wet snow, Gliding snow

### Avalanche prone location Danger description

In particular on very steep grassy slopes more gliding avalanches are to be expected. These can reach large size. Areas with glide cracks are to be avoided. As a consequence of warming during the day and solar radiation medium-sized and, in isolated cases, large wet avalanches are possible as the day progresses. Caution is to be exercised in particular on steep sunny slopes.

## Moderate (2+)

## Wind slab

### Avalanche prone location Danger description

As a consequence of new snow and a sometimes strong westerly wind, avalanche prone wind slabs formed on Monday in particular adjacent to ridgelines and in gullies and bowls. These can be released by a single winter sport participant. Avalanches can reach medium size. The wind slabs are to be evaluated with care and prudence in steep terrain.

Danger levels

1 low

2 moderate

3 considerable

4 high

5 very high
