

Avalanche danger

Forecast through: 27.4.2024, 17:00 / Next update: 27.4.2024, 17:00

Wind slab, Persistent weak layers

Avalanche prone locations Danger description

As a consequence of a strengthening southerly wind, sometimes avalanche prone wind slabs will form in particular at elevated altitudes. These can be released by people, but they will be small in most cases. The fresh wind slabs are to be evaluated with care and prudence. Dry avalanches can additionally in isolated cases be released in near-surface layers also. These can reach medium size. Backcountry touring and other off-piste activities call for careful route selection.

Moderate (2)

Wet snow, Gliding snow

Avalanche prone locations Danger description

Below approximately 2200 m more gliding avalanches are possible, even large ones in isolated cases. Caution is to be exercised in areas with glide cracks. In addition as the day progresses moist snow slides and avalanches are possible. This applies in particular on steep sunny slopes.
