

# Avalanche danger

Forecast through: 2.2.2026, 17:00 / Next update: 2.2.2026, 08:00

## Persistent weak layers

### Avalanche prone locations Danger description

Avalanches can be released in the weakly bonded old snow, even by a single winter sport participant. Slopes that have been little used this winter thus far are especially unfavourable. Avalanches can reach large size in isolated cases. Remotely triggered avalanches are possible. Whumpfung sounds and the formation of shooting cracks when stepping on the snowpack can indicate the danger.

In addition sometimes avalanche prone wind slabs will form in particular adjacent to ridgelines and in gullies and bowls as the day progresses. They are to be evaluated with care and prudence in particular in very steep terrain.

Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger.

Danger levels

1 low

2 moderate

3 considerable

4 high

5 very high
