

Avalanche danger

Forecast through: 19.3.2024, 17:00 / Next update: 19.3.2024, 08:00

Wind slab, Persistent weak layers

Avalanche prone location

Danger description
As a consequence of new snow and a sometimes strong northwesterly wind, avalanche prone wind slabs formed on Monday in particular adjacent to ridgelines as well as at elevated altitudes. These can be released, even by a single winter sport participant. Avalanches can reach medium size.

Avalanches can additionally in isolated cases be released in the old snowpack, mostly by large additional loads. These can reach large size. The avalanche prone locations are barely recognisable, even to the trained eye.

Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger and careful route selection.

Moderate (2)

Gliding snow

Avalanche prone location

Danger description
In particular on very steep grassy slopes gliding avalanches are possible. These can reach large size. Areas with glide cracks are to be avoided.

As a consequence of warming during the day and solar radiation small to medium-sized wet avalanches are possible as the day progresses.

Danger levels

1 low

2 moderate

3 considerable

4 high

5 very high
