

# Avalanche danger

Forecast through: 14.12.2025, 17:00 / Next update: 14.12.2025, 17:00

## Persistent weak layers

### Avalanche prone locations Danger description

Avalanches can in some places be released by a single winter sport participant. These can be triggered in the old snowpack and reach large size in isolated cases. The avalanche prone locations are to be found in areas where the snow cover is rather shallow and at transitions into gullies and bowls. Whumpfung sounds can indicate the danger. Defensive route selection is appropriate.

Danger levels

1 low

2 moderate

3 considerable

4 high

5 very high
