

Avalanche danger

Forecast through: 20.4.2024, 17:00 / Next update: 20.4.2024, 08:00

Wind slab

Avalanche prone locations Danger description

The fresh wind slabs are prone to triggering. The avalanche prone locations are to be found in particular in gullies and bowls, and behind abrupt changes in the terrain and in places that are protected from the wind. Single winter sport participants can release avalanches. Mostly these are medium-sized. At elevated altitudes the prevalence and size of the avalanche prone locations will increase. Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger.

Danger levels

1 low

2 moderate

3 considerable

4 high

5 very high
