

Significant increase in avalanche danger as a consequence of fresh snow and stormy weather, in particular in the north

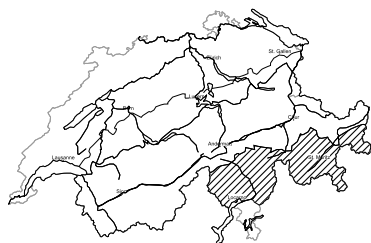

Edition: 11.11.2017, 17:00 / Next update: 12.11.2017, 17:00

Avalanche danger

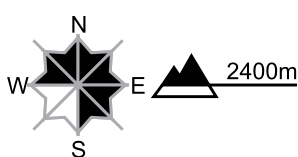

region D

Level 2, moderate

Snow drifts

Avalanche prone locations

Danger description

In particular at elevated altitudes rather small snow drift accumulations will form. They are to be found in particular in gullies and bowls. The snow drift accumulations are in some cases prone to triggering. Careful route selection is required.
