Avalanche danger

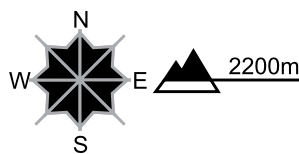

region B

Level 3, considerable

Fresh snow and snow drifts

Avalanche prone locations

Danger description

The fresh snow and snow drift accumulations are in some cases still prone to triggering. Avalanches can in some places be released by a single winter sport participant. Avalanches can reach medium size in isolated cases. The avalanche prone locations are to be found in particular on wind-loaded slopes and in gullies and bowls. Off-piste activities call for experience in the assessment of avalanche danger and careful route selection.
