

Considerable avalanche danger will be encountered over a wide area

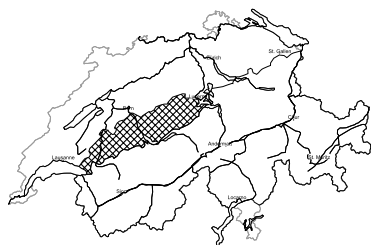

Edition: 15.11.2017, 17:00 / Next update: 16.11.2017, 17:00

Avalanche danger

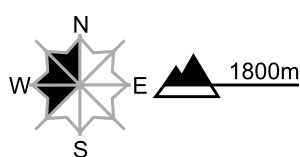

region C

Level 3, considerable

Snow drifts

Avalanche prone locations

Danger description

As a consequence of the Bise wind snow drift accumulations have formed. These can be released by a single winter sport participant in some cases. Apart from the danger of being buried, restraint should be exercised also in view of the danger of avalanches sweeping people along and giving rise to falls. Ski touring and snowshoe hiking call for careful route selection.

Full-depth avalanches

On steep grassy slopes mostly small full-depth avalanches are to be expected. Areas with glide cracks are to be avoided as far as possible.
