

Weak layers in the old snowpack necessitate caution

Edition: 16.11.2017, 17:00 / Next update: 17.11.2017, 17:00

Avalanche danger

region C

Level 1, low

Snow drifts

From a snow sport perspective, in most cases insufficient snow is lying. Older snow drift accumulations are to be found in particular in gullies and bowls, and behind abrupt changes in the terrain. They are mostly small and can be released in isolated cases especially at their margins. Apart from the danger of being buried, restraint should be exercised in particular in view of the danger of avalanches sweeping people along and giving rise to falls.

Danger levels

 1 low

 2 moderate

 3 consider.

 4 high

 5 very high
