

# Considerable avalanche danger will be encountered in some regions. Snow drifts require caution

Edition: 26.11.2017, 17:00 / Next update: 27.11.2017, 17:00

## Avalanche danger

### region D

### Level 2, moderate

#### Snow drifts, old snow

#### Avalanche prone locations

#### Danger description

As a consequence of fresh snow and strong wind snow drift accumulations have formed. They are to be found in particular in gullies and bowls, and behind abrupt changes in the terrain. They can in some cases be released by a single winter sport participant, but they will be small in most cases.

Additionally in very isolated cases avalanches can be released in the old snowpack and reach medium size. This applies in particular on steep shady slopes. Ski touring and other off-piste activities, including snowshoe hiking, call for careful route selection.

#### Remarks

The Avalanche Warning Service currently has only a small amount of information, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

#### Danger levels
