

**In the northeast a considerable avalanche danger will prevail.  
 Snow drifts require caution**

Edition: 27.11.2017, 17:00 / Next update: 28.11.2017, 17:00

**Avalanche danger**

**region B** **Level 2, moderate**

**Snow drifts**

**Avalanche prone locations**

**Danger description**

As a consequence of the southwesterly wind further snow drift accumulations will form. Fresh and somewhat older snow drift accumulations are to be found in particular in gullies and bowls, and behind abrupt changes in the terrain. They can in some cases be released by a single winter sport participant, but they will be small in most cases. The snow drift accumulations are to be evaluated with care and prudence in steep terrain.

**Remarks**

The Avalanche Warning Service currently has only a small amount of information, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.
