

Fresh snow drifts are to be avoided. Considerable avalanche danger will be encountered in some regions

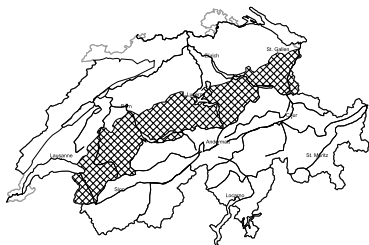

Edition: 1.12.2017, 17:00 / Next update: 2.12.2017, 17:00

Avalanche danger

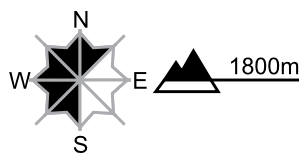

region A

Level 3, considerable

Snow drifts

Avalanche prone locations

Danger description

The Bise wind will transport the loosely bonded old snow. Precarious snow drift accumulations will form. These can be released by a single winter sport participant. The fresh snow drift accumulations are clearly recognisable to the trained eye. They are to be avoided in steep terrain. Ski touring and other off-piste activities, including snowshoe hiking, call for experience in the assessment of avalanche danger.
