

Moderate avalanche danger will be encountered over a wide area

Edition: 2.12.2017, 17:00 / Next update: 3.12.2017, 17:00

Avalanche danger

region E **Level 2, moderate**

Snow drifts

Avalanche prone locations

Danger description

Only a little snow is lying.
 As a consequence of the Bise wind clearly visible snow drift accumulations have formed. This applies in particular adjacent to the ridge line as well as in gullies and bowls, and behind abrupt changes in the terrain. The snow drift accumulations are mostly small but can be released in isolated cases. They are to be evaluated with care and prudence in very steep terrain. Restraint should be exercised because avalanches can sweep people along and give rise to falls.
