

Moderate avalanche danger will be encountered over a wide area. Snow drifts require caution

Edition: 3.12.2017, 17:00 / Next update: 4.12.2017, 17:00

Avalanche danger

region A

Level 2, moderate

Snow drifts

Avalanche prone locations

Danger description

The northerly wind will transport the fresh snow and, in some cases, old snow as well. Fresh and somewhat older snow drift accumulations are mostly small but can in some cases be released easily. They are to be bypassed as far as possible. Defensive route selection is important.

Full-depth avalanches

Mostly small full-depth avalanches are possible on steep grassy slopes. This applies in particular on steep east, south and west facing slopes below approximately 2000 m. Areas with glide cracks are to be avoided as far as possible.
