

# Moderate avalanche danger will be encountered over a wide area. Snow drifts require caution

Edition: 3.12.2017, 17:00 / Next update: 4.12.2017, 17:00

## Avalanche danger

**region C** **Level 2, moderate**

### Old snow, snow drifts

#### Avalanche prone locations

#### Danger description

Thus far only a little snow is lying. Avalanches can in isolated cases be released in the old snowpack. This applies in particular on very steep shady slopes. These avalanche prone locations are rare but difficult to recognise. Isolated whumpung sounds can indicate the danger. Defensive route selection is recommended. As a consequence of the northerly wind sometimes easily released snow drift accumulations will form. They are to be found in particular in gullies and bowls, and behind abrupt changes in the terrain. In high Alpine regions the snow drift accumulations are larger. They are to be avoided in steep terrain.

**Danger levels**

1 low

2 moderate

3 consider.

4 high

5 very high
