

Moderate avalanche danger will be encountered over a wide area

Edition: 6.12.2017, 17:00 / Next update: 7.12.2017, 17:00

Avalanche danger

region C **Level 2, moderate**

Old snow, snow drifts

Avalanche prone locations

Danger description

Avalanches can in isolated cases be released in the old snowpack. This applies in particular on very steep shady slopes. These avalanche prone locations are rare but difficult to recognise. Careful route selection is recommended.

The somewhat older snow drift accumulations are to be evaluated with care and prudence. They are to be found adjacent to the ridge line in all aspects. Apart from the danger of being buried, restraint should be exercised also in view of the danger of avalanches sweeping people along and giving rise to falls.
