

In some regions increase in avalanche danger as a consequence of fresh snow and wind

Edition: 7.12.2017, 17:00 / Next update: 8.12.2017, 17:00

Avalanche danger

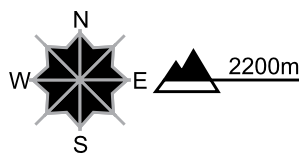

region C

Level 2, moderate

Snow drifts, old snow

Avalanche prone locations

Danger description

The strong wind will transport the fresh snow and, in some cases, old snow as well. The mostly small snow drift accumulations can be released by a single winter sport participant in some cases. They are to be found in gullies and bowls, and behind abrupt changes in the terrain.

Avalanches can in isolated cases be released in the old snowpack. This applies in particular on very steep shady slopes. These avalanche prone locations are rare but difficult to recognise.

Careful route selection is required.
