

In some regions increase in avalanche danger as a consequence of fresh snow and wind

Edition: 7.12.2017, 17:00 / Next update: 8.12.2017, 17:00

Avalanche danger

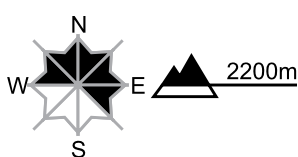

region D

Level 2, moderate

Snow drifts, old snow

Avalanche prone locations

Danger description

The fresh and older snow drift accumulations can be released by a single winter sport participant in some cases. At elevated altitudes the prevalence and size of the avalanche prone locations will increase. Avalanches can in isolated cases be released in the old snowpack. This applies in particular on steep, little used slopes. These avalanche prone locations are rare. Isolated whumpung sounds can indicate the danger. Careful route selection is recommended.
