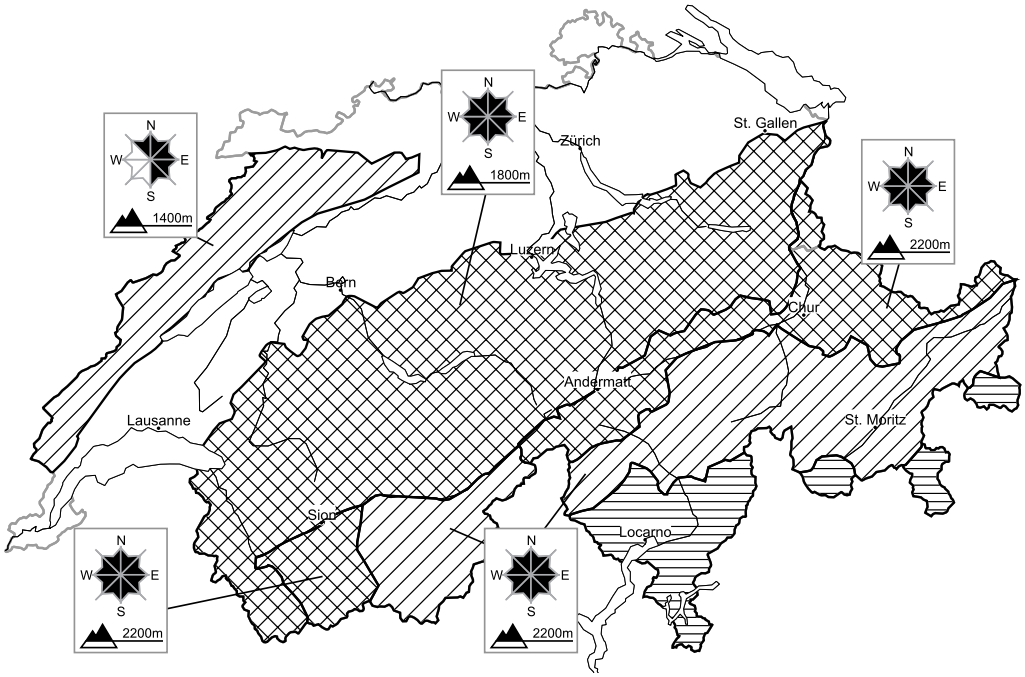
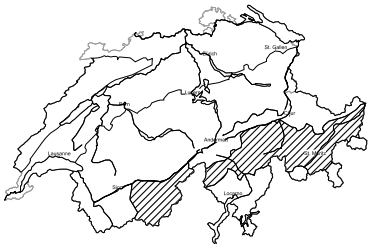
Avalanche danger

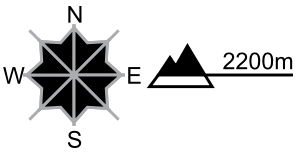


region C | **Level 2, moderate**



Snow drifts, old snow

Avalanche prone locations



Danger description

The sometimes storm force wind will transport the fresh snow and, in some cases, old snow as well. The fresh and older snow drift accumulations can be released by a single winter sport participant in some cases. Mostly the avalanches are small. At elevated altitudes the prevalence and size of the avalanche prone locations will increase.
Avalanches can in isolated cases be released in the old snowpack. This applies in particular on steep, little used slopes. These avalanche prone locations are rare. Careful route selection is recommended.

Danger levels 1 low 2 moderate 3 consider. 4 high 5 very high
