

# In the west a high avalanche danger will be encountered in some regions

Edition: 10.12.2017, 17:00 / Next update: 11.12.2017, 17:00

## Avalanche danger

### region C

### Level 3, considerable

#### Fresh snow and snow drifts

##### Avalanche prone locations

##### Danger description

The storm force wind will transport the fresh snow significantly. The fresh snow drift accumulations are prone to triggering. Single winter sport participants can release avalanches easily, including dangerously large ones. Natural avalanches are possible. Backcountry touring and other off-piste activities call for extensive experience in the assessment of avalanche danger and great restraint.

#### Wet and full-depth avalanches

Mostly small full-depth avalanches are possible on steep grassy slopes. This applies in particular on steep east, south and west facing slopes below approximately 2400 m as well as on north facing slopes below approximately 2000 m. Areas with glide cracks are to be avoided as far as possible.

Below approximately 2000 m wet snow slides and avalanches are to be expected.

#### Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
