

In the west a high avalanche danger will be encountered in some regions

Edition: 10.12.2017, 17:00 / Next update: 11.12.2017, 17:00

Avalanche danger

region D

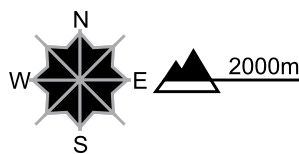

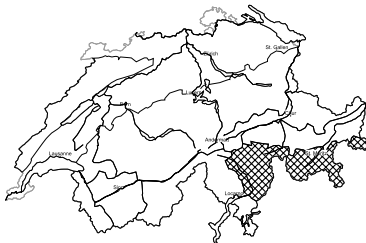

Level 3, considerable

Snow drifts, old snow

Avalanche prone locations

Danger description

As a consequence of fresh snow and stormy weather snow drift accumulations will form. As the day progresses the snow drift accumulations will increase in size appreciably. They will be deposited on a weakly bonded old snowpack. Single winter sport participants can release avalanches easily. From the middle of the day natural avalanches are possible, including medium-sized ones. Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger and caution.
