

In the west a high avalanche danger will be encountered in some regions

Edition: 10.12.2017, 17:00 / Next update: 11.12.2017, 17:00

Avalanche danger

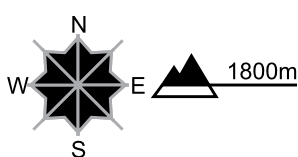

region A

Level 4, high

Fresh snow and snow drifts, old snow

Avalanche prone locations

Danger description

The storm force wind will transport the fresh snow significantly. Extensive snow drift accumulations will form. These are prone to triggering. Medium-sized and, in isolated cases, large natural avalanches are to be expected. The off-piste conditions are very critical. Exposed parts of transportation routes can be endangered.

Wet and full-depth avalanches

Mostly small full-depth avalanches are possible on steep grassy slopes. This applies in particular on steep east, south and west facing slopes below approximately 2400 m as well as on north facing slopes below approximately 2000 m. Areas with glide cracks are to be avoided as far as possible. Below approximately 2000 m wet snow slides and avalanches are to be expected.

Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
