

# In the west a high avalanche danger will be encountered in some regions

Edition: 10.12.2017, 17:00 / Next update: 11.12.2017, 17:00

## Avalanche danger

**region F**

**Level 3, considerable**

### Fresh snow and snow drifts, old snow

#### Avalanche prone locations

#### Danger description

As a consequence of fresh snow and stormy weather snow drift accumulations will form. As the day progresses the snow drift accumulations will increase in size. They will be deposited on a weakly bonded old snowpack. Single winter sport participants can release avalanches easily. Individual natural avalanches are possible. Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger.

**Danger levels**

1 low

2 moderate

3 consider.

4 high

5 very high
