

# In the southeast a high avalanche danger will be encountered in some regions

Edition: 12.12.2017, 08:00 / Next update: 12.12.2017, 17:00

## Avalanche danger

### region B

### Level 3, considerable

#### Fresh snow and snow drifts, old snow

#### Avalanche prone locations

#### Danger description

As a consequence of fresh snow and stormy weather extensive snow drift accumulations have formed. They are lying on top of a weakly bonded old snowpack on west, north and east facing slopes. Single winter sport participants can release avalanches easily, including dangerously large ones. Individual natural avalanches are possible. Backcountry touring and other off-piste activities call for caution and restraint.

#### Danger levels
