Avalanche danger

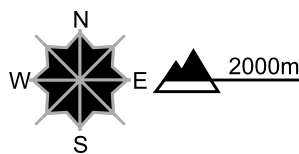

region D

Level 3, considerable

Fresh snow and snow drifts, old snow

Avalanche prone locations

Danger description

As a consequence of fresh snow and stormy weather extensive snow drift accumulations have formed. They are lying on top of a weakly bonded old snowpack on west, north and east facing slopes. Single winter sport participants can release avalanches easily, including dangerously large ones. Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger and caution.
