

High avalanche danger will be encountered in some regions

Edition: 15.12.2017, 08:00 / Next update: 15.12.2017, 17:00

Avalanche danger

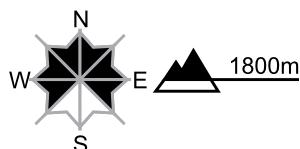

region D **Level 3, considerable**

Old snow, snow drifts

Avalanche prone locations

Danger description

The fresh and older snow drift accumulations of the last few days are lying on top of a weakly bonded old snowpack in particular on west, north and east facing slopes. Single winter sport participants can release avalanches easily, including dangerously large ones. Remote triggering is possible. Backcountry touring and other off-piste activities call for caution and restraint.
