

# Considerable avalanche danger will be encountered over a wide area

Edition: 18.12.2017, 08:00 / Next update: 18.12.2017, 17:00

## Avalanche danger

### region A

### Level 3, considerable

#### Fresh snow and snow drifts

##### Avalanche prone locations

##### Danger description

The fresh snow and snow drift accumulations of the last few days can still be released in some cases. As a consequence of the northwesterly wind avalanche prone snow drift accumulations will form. Avalanches can be released, even by a single winter sport participant and reach dangerously large size. Individual natural avalanches are possible. Ski touring and other off-piste activities, including snowshoe hiking, call for experience and restraint.

#### Full-depth avalanches

On steep grassy slopes small to medium-sized full-depth avalanches are to be expected. This applies in particular on steep east, south and west facing slopes below approximately 2400 m as well as on north facing slopes below approximately 2000 m. Areas with glide cracks are to be avoided as far as possible.

#### Danger levels
