

Considerable avalanche danger will be encountered over a wide area

Edition: 18.12.2017, 08:00 / Next update: 18.12.2017, 17:00

Avalanche danger

region B

Level 3, considerable

Fresh snow and snow drifts

Avalanche prone locations

Danger description

As a consequence of the westerly wind avalanche prone snow drift accumulations will form. The fresh snow and snow drift accumulations of the last few days can still be released in some cases. Avalanches can be released, even by a single winter sport participant and reach dangerously large size.

Ski touring and other off-piste activities, including snowshoe hiking, call for experience and restraint.

Full-depth avalanches

On steep grassy slopes small to medium-sized full-depth avalanches are to be expected. This applies in particular on steep east, south and west facing slopes below approximately 2200 m as well as on north facing slopes below approximately 2000 m. Areas with glide cracks are to be avoided as far as possible.

Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
