

Considerable avalanche danger will be encountered over a wide area

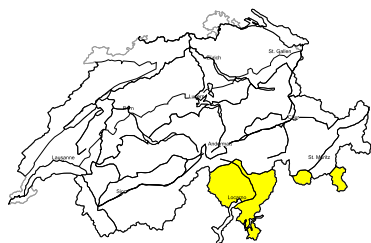

Edition: 18.12.2017, 08:00 / Next update: 18.12.2017, 17:00

Avalanche danger

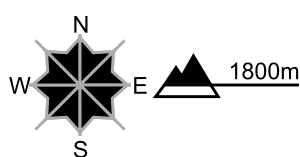

region E

Level 2, moderate

Old snow, snow drifts

Avalanche prone locations

Danger description

The mostly small snow drift accumulations are in some cases still prone to triggering. Additionally in isolated cases avalanches can be released in the old snowpack. These avalanche prone locations are to be found in particular on very steep shady slopes. Mostly the avalanches are small. Backcountry touring calls for careful route selection.
 Sotto Ceneri: Even in moderately steep terrain there is a danger of falling on the icy crust.
