

# Considerable avalanche danger will be encountered over a wide area

Edition: 18.12.2017, 17:00 / Next update: 19.12.2017, 08:00

## Avalanche danger

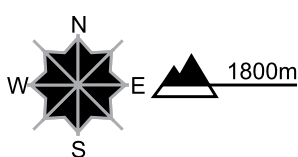

**region E**

**Level 2, moderate**

### Old snow, snow drifts

#### Avalanche prone locations

#### Danger description

In isolated cases avalanches can be released in the old snowpack. These avalanche prone locations are to be found in particular on very steep shady slopes. Mostly the avalanches are small.

The rather small snow drift accumulations of the last few days are to be evaluated with care and prudence. They are to be found in particular adjacent to the ridge line on south facing slopes. Backcountry touring calls for careful route selection.

Sotto Ceneri: Even in moderately steep terrain there is a danger of falling on the icy crust.

**Danger levels**

1 low

2 moderate

3 consider.

4 high

5 very high
