

# Considerable avalanche danger will be encountered in some regions

Edition: 23.12.2017, 08:00 / Next update: 23.12.2017, 17:00

## Avalanche danger

**region D**

**Level 2, moderate**

### Snow drifts, old snow

#### Avalanche prone locations

#### Danger description

As a consequence of the northerly wind clearly visible snow drift accumulations have formed, in particular on south facing slopes at high altitude. These can still be released in some cases. They are to be evaluated with care and prudence in steep terrain.

Avalanches can additionally in isolated cases be released in the old snowpack, mostly by large additional loads. Caution is to be exercised at transitions from a shallow to a deep snowpack. These avalanche prone locations are rare but barely recognisable, even to the trained eye. Defensive route selection is advisable.

**Danger levels**

1 low

2 moderate

3 consider.

4 high

5 very high
