Avalanche danger

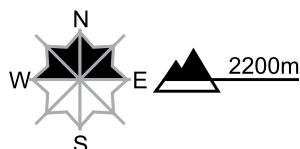

region B **Level 2, moderate**

Old snow

Avalanche prone locations

Danger description

Avalanches can be released in the old snowpack, mostly by large additional loads. Caution is to be exercised at transitions from a shallow to a deep snowpack, when entering gullies and bowls for example. The avalanche prone locations are rather rare. Whumpung sounds and the formation of shooting cracks when stepping on the snowpack can indicate the danger. Careful route selection and spacing between individuals are recommended.

Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
