Avalanche danger

region C

Level 2, moderate

Fresh snow and snow drifts

Avalanche prone locations

Danger description

As a consequence of fresh snow and strong wind avalanche prone snow drift accumulations will form. These can be released by a single winter sport participant. As the day progresses the snow drift accumulations will increase in size. The danger of avalanches will increase but remain within the current danger level. The fresh snow drift accumulations are to be avoided as far as possible.

Full-depth avalanches

On steep grassy slopes individual small and medium-sized full-depth avalanches are possible. This applies in particular on steep east, south and west facing slopes below approximately 2400 m as well as on north facing slopes below approximately 2000 m. Areas with glide cracks are to be avoided as far as possible.
