

In the south a considerable avalanche danger will prevail

Edition: 27.12.2017, 08:00 / Next update: 27.12.2017, 17:00

Avalanche danger

region E **Level 1, low**

Snow drifts

As a consequence of fresh snow and stormy weather snow drift accumulations will form. These are mostly small but in some cases prone to triggering. Individual avalanche prone locations are to be found in particular in gullies and bowls, and behind abrupt changes in the terrain. The snow drift accumulations are to be evaluated with care and prudence in particular in very steep terrain.
