Avalanche danger

region A **Level 3, considerable**

Fresh snow and snow drifts, old snow

Avalanche prone locations

Danger description

As a consequence of fresh snow and strong wind avalanche prone snow drift accumulations will form. The danger level 3 (considerable) will be reached in the late morning. The fresh snow and snow drift accumulations are lying on top of a weakly bonded old snowpack in particular on west, north and east facing slopes. Single persons can release avalanches. In the afternoon individual natural avalanches are possible. Avalanches can release the weakly bonded old snow as well and reach a dangerous size. Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger.
