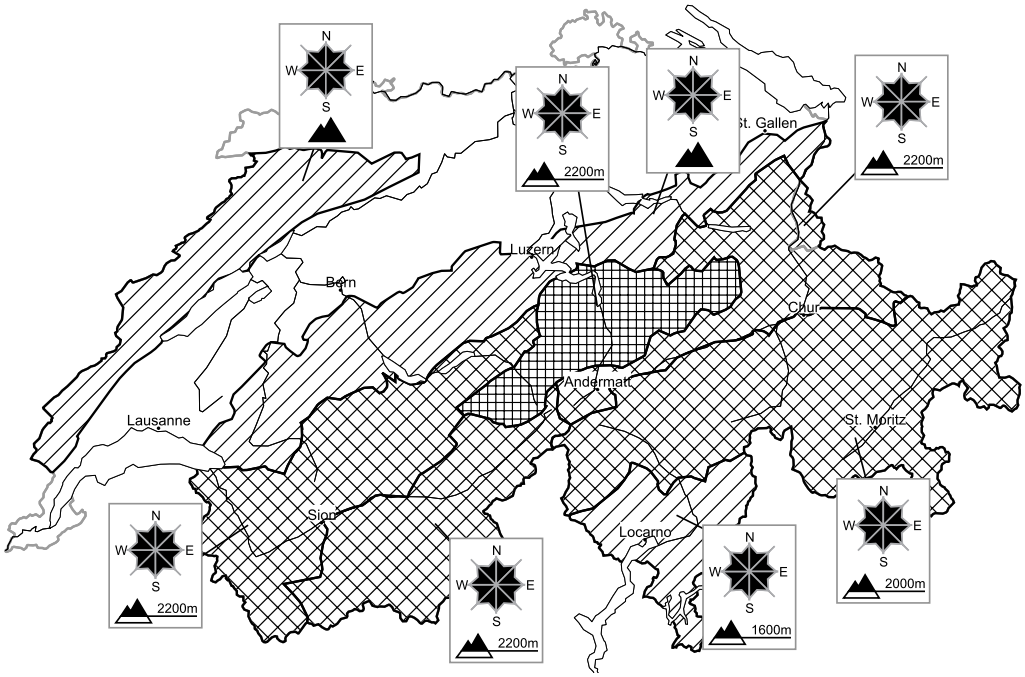
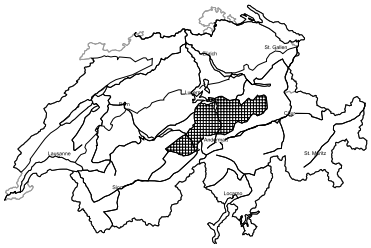
During the night a high avalanche danger will persist in some regions

Edition: 30.12.2017, 17:00 / Next update: 31.12.2017, 08:00

Avalanche danger

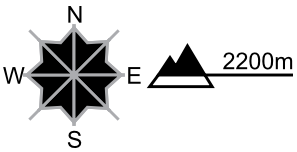


region A **Level 4, high**



Fresh snow and snow drifts

Avalanche prone locations



Danger description

During the night a high avalanche danger will still be encountered. As the snowfall becomes more intense more frequent natural avalanches are to be expected. From starting zones at higher altitudes avalanches, capable of reaching the valleys, must be expected in isolated cases. Exposed transportation routes can be endangered.
The snow sport conditions outside marked and open pistes remain very precarious.

Wet and full-depth avalanches

During the night a large number of small and medium-sized full-depth and wet avalanches are to be expected below approximately 2200 m. Exposed transportation routes can be endangered.
