

# During the night a high avalanche danger will persist in some regions

Edition: 30.12.2017, 17:00 / Next update: 31.12.2017, 08:00

## Avalanche danger

**region E**

**Level 2, moderate**

**Snow drifts, old snow**

**Avalanche prone locations**

**Danger description**

Fresh and somewhat older snow drift accumulations can be released by a single winter sport participant in some cases. The avalanche prone locations are to be found in particular adjacent to the ridge line and in gullies and bowls. Mostly avalanches are small. Additionally in very isolated cases avalanches can also be released in the old snowpack, especially on north facing slopes. Backcountry touring calls for careful route selection.

**Danger levels**

1 low

2 moderate

3 consider.

4 high

5 very high
