

# In the west a high avalanche danger will be encountered in some regions

Edition: 3.1.2018, 08:00 / Next update: 3.1.2018, 17:00

## Avalanche danger

### region C

### Level 3, considerable

#### Fresh snow and snow drifts

##### Avalanche prone locations

##### Danger description

As a consequence of fresh snow and stormy weather dangerous snow drift accumulations will form. Avalanches can be released, even by a single winter sport participant and reach medium size. An increasing number of small and medium-sized natural avalanches are to be expected as the snowfall becomes more intense, this applies especially in the afternoon. Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger.

#### Wet and full-depth avalanches

As a consequence of the rain more frequent full-depth and wet avalanches are to be expected below approximately 2000 m.

#### Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
