

In the west a high avalanche danger will be encountered in some regions

Edition: 3.1.2018, 08:00 / Next update: 3.1.2018, 17:00

Avalanche danger

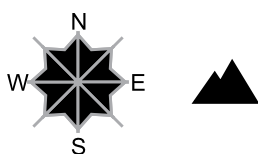

region E

Level 2, moderate

Snow drifts

Avalanche prone locations

Danger description

Especially at high altitude snow drift accumulations will form. These are to be bypassed in very steep terrain. As a consequence of fresh snow and strong wind the prevalence and size of the avalanche prone locations will increase in the afternoon. In the afternoon danger level 3 (considerable) will be reached. Backcountry touring and snowshoe hiking call for careful route selection.

Wet and full-depth avalanches

As a consequence of the rain mostly small full-depth and wet avalanches are to be expected below approximately 2000 m.

Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
