Avalanche danger

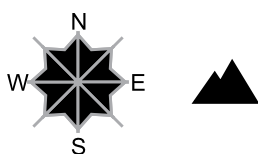

region C

Level 3, considerable

Snow drifts

Avalanche prone locations

Danger description

At elevated altitudes avalanche prone snow drift accumulations have formed. Single winter sport participants can release avalanches. Backcountry touring and snowshoe hiking call for experience in the assessment of avalanche danger.

Wet and full-depth avalanches

Below approximately 2000 m full-depth and wet avalanches are to be expected, in the event of rain in particular during the night.
