

Considerable avalanche danger will be encountered over a wide area

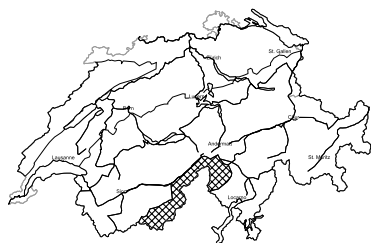

Edition: 7.1.2018, 08:00 / Next update: 7.1.2018, 17:00

Avalanche danger

region A

Level 3, considerable

Fresh snow and snow drifts, old snow

Avalanche prone locations

Danger description

As a consequence of fresh snow and wind avalanche prone snow drift accumulations will form. The danger of avalanches will increase a little during the day. Single winter sport participants can release avalanches. These can penetrate deep layers and reach dangerously large size. Snow sport activities outside marked and open pistes call for experience in the assessment of avalanche danger.

Full-depth avalanches

Below approximately 2200 m more full-depth avalanches are possible. This applies in all aspects.
