

# In southern Upper Valais a high avalanche danger will be encountered over a wide area

Edition: 7.1.2018, 17:00 / Next update: 8.1.2018, 08:00

## Avalanche danger

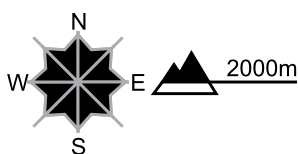

**region A**

**Level 4, high**

### Fresh snow and snow drifts, old snow

#### Avalanche prone locations

#### Danger description

Medium-sized and, in many cases, large natural dry avalanches are to be expected as a consequence of fresh snow and strong wind, this applies in particular from late morning. In the typical avalanche paths the avalanches can reach the valleys. Exposed buildings and exposed parts of transportation routes are endangered. Temporary safety measures are to be reviewed. The conditions are very dangerous for snow sport activities outside marked and open pistes.

### Wet and full-depth avalanches

As a consequence of the rain more frequent full-depth and wet avalanches are to be expected, in particular on steep slopes below approximately 2000 m as well as on road cut slopes. This applies also during the night.

**Danger levels**

1 low

2 moderate

3 consider.

4 high

5 very high
