

In southern Upper Valais and in northern Ticino a high avalanche danger will be encountered in some regions

Edition: 10.1.2018, 08:00 / Next update: 10.1.2018, 17:00

Avalanche danger

region A

Level 4, high

Fresh snow and snow drifts, old snow

Avalanche prone locations

Danger description

As a consequence of the ceasing of precipitation there will be a further decrease in the avalanche danger. Only isolated large avalanches are possible. In the typical avalanche paths these can reach the valleys. Exposed parts of transportation routes can be endangered. Temporary safety measures can be relaxed once an appropriate review has taken place. The conditions are dangerous for snow sport activities outside marked and open pistes.

Wet and full-depth avalanches

More full-depth and wet avalanches are possible, in particular on steep slopes below approximately 2000 m as well as on road cut slopes.

Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
