

In southern Upper Valais and in northern Ticino a high avalanche danger will be encountered in some regions

Edition: 10.1.2018, 08:00 / Next update: 10.1.2018, 17:00

Avalanche danger

region C

Level 3, considerable

Snow drifts, old snow

Avalanche prone locations

Danger description

As a consequence of the southerly wind further snow drift accumulations have formed. Single winter sport participants can release avalanches. These can penetrate near-ground layers of the snowpack and reach dangerously large size. Snow sport activities outside marked and open pistes call for experience in the assessment of avalanche danger.

Full-depth avalanches

More full-depth avalanches are possible. This applies in all aspects below approximately 2200 m. Caution is to be exercised in areas with glide cracks.

Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
