

In southern Upper Valais and in northern Ticino a high avalanche danger will be encountered in some regions

Edition: 10.1.2018, 08:00 / Next update: 10.1.2018, 17:00

Avalanche danger

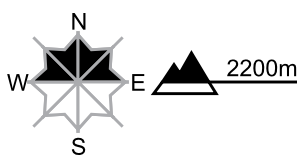

region D

Level 3, considerable

Snow drifts

Avalanche prone locations

Danger description

As a consequence of the southerly wind snow drift accumulations have formed, especially at elevated altitudes. They are to be found adjacent to the ridge line and in pass areas in all aspects. Mostly avalanches are small but easily released.

Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger and careful route selection.

Full-depth avalanches

More full-depth avalanches are possible. This applies in all aspects below approximately 2400 m. Caution is to be exercised in areas with glide cracks.

Danger levels

 1 low

 2 moderate

 3 consider.

 4 high

 5 very high
