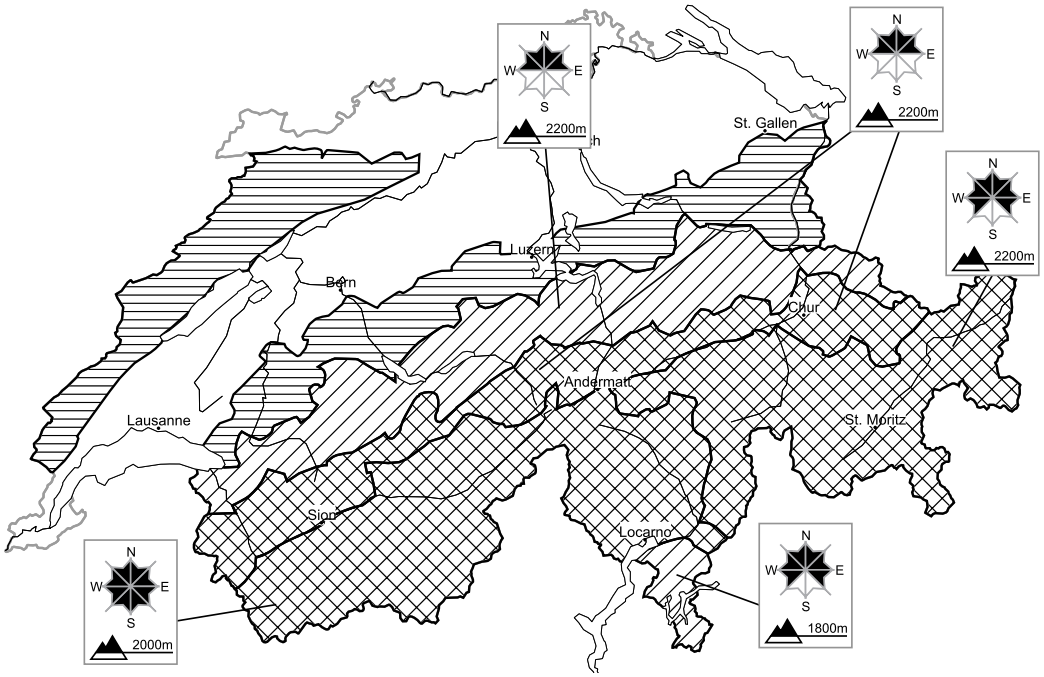
Avalanche bulletin through Thursday, 11 January 2018

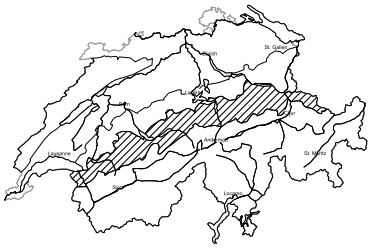
Considerable avalanche danger will be encountered over a wide area

Edition: 10.1.2018, 17:00 / Next update: 11.1.2018, 08:00

Avalanche danger

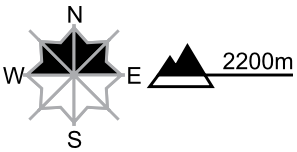


region E | **Level 2, moderate**



Snow drifts

Avalanche prone locations



Danger description

The somewhat older snow drift accumulations are in some cases still prone to triggering. These are rather small. They are to be found in particular in gullies and bowls, and behind abrupt changes in the terrain. Avalanche prone locations are to be found also adjacent to the ridge line in all aspects. The number and size of avalanche prone locations will increase with altitude. Careful route selection is recommended.

Full-depth avalanches

More full-depth avalanches are possible. This applies in all aspects below approximately 2400 m. Caution is to be exercised in areas with glide cracks.

Danger levels 1 low 2 moderate 3 consider. 4 high 5 very high
