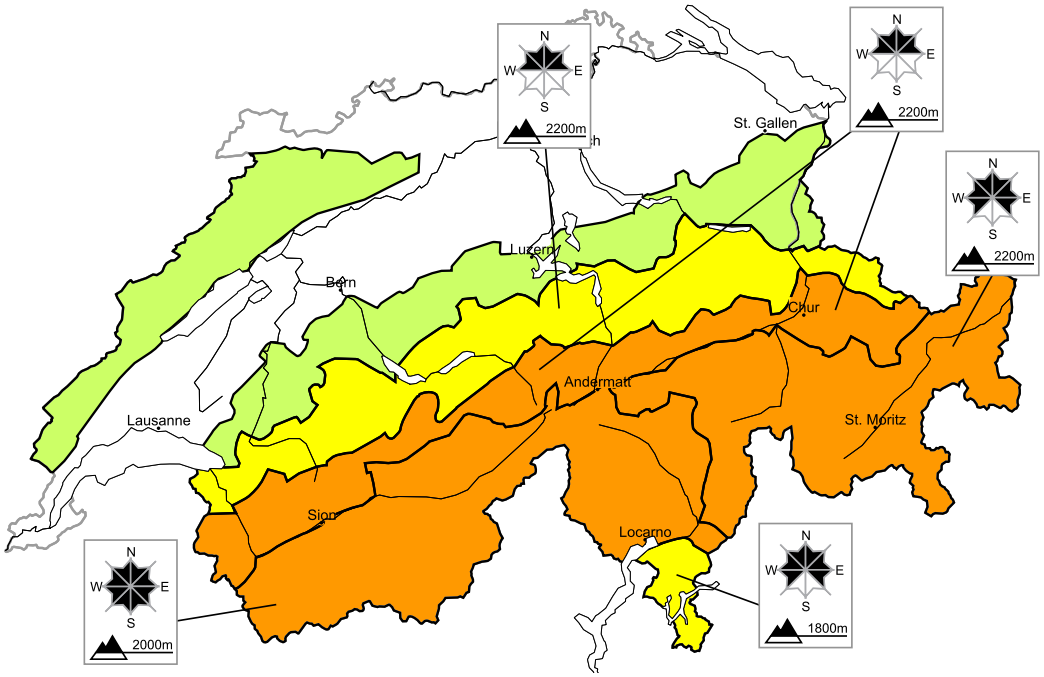
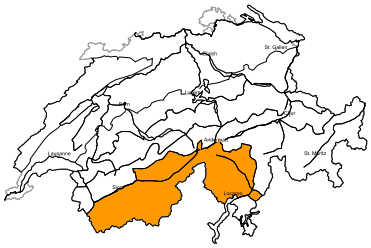
Considerable avalanche danger will be encountered over a wide area

Edition: 10.1.2018, 17:00 / Next update: 11.1.2018, 08:00

Avalanche danger

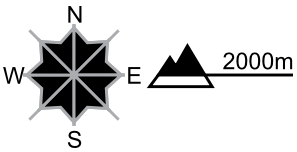


region A | **Level 3, considerable**



Fresh snow and snow drifts

Avalanche prone locations



Danger description

The fresh snow and snow drift accumulations of the last four days can still be released in some cases, in particular at transitions from a shallow to a deep snowpack, when entering gullies and bowls for example. Only isolated natural avalanches are possible. They can in some cases reach quite a large size. Snow sport activities outside marked and open pistes call for experience in the assessment of avalanche danger and caution.

Full-depth avalanches

More full-depth and wet avalanches are possible, in particular on steep slopes below approximately 2200 m as well as on road cut slopes.

Danger levels 1 low | 2 moderate | 3 consider. | 4 high | 5 very high
