

Considerable avalanche danger will be encountered over a wide area

Edition: 12.1.2018, 08:00 / Next update: 12.1.2018, 17:00

Avalanche danger

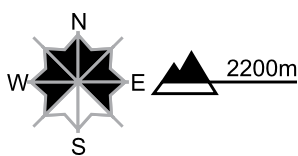

region A

Level 3, considerable

Snow drifts

Avalanche prone locations

Danger description

The somewhat older snow drift accumulations can still be released in some cases, in particular at transitions from a shallow to a deep snowpack, when entering gullies and bowls for example. Avalanches can reach quite a large size. Snow sport activities outside marked and open pistes call for experience in the assessment of avalanche danger.

Full-depth avalanches

More full-depth and wet avalanches are possible, in particular on steep slopes below approximately 2200 m as well as on road cut slopes.

Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
