

A generally favourable avalanche situation will prevail

Edition: 12.1.2018, 17:00 / Next update: 13.1.2018, 08:00

Avalanche danger

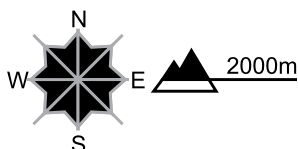

region B **Level 2, moderate**

Old snow

Avalanche prone locations

Danger description

Persons can release avalanches in some places. This applies in particular in case of a large load, especially at transitions from a shallow to a deep snowpack. Careful route selection is required.

Full-depth avalanches

More full-depth and wet avalanches are possible, in particular on steep slopes below approximately 2200 m.
